The fiber optic modular system is designed for the customer's needs. With the slim design and easy handling, it is ideal to install in data centers. The modular system can be expanded without disconnecting the already connected fiber. The fiber optic modular system from Micropol is a flexible solution that saves time and ensures quality requirements.

Like all products at Micropol, the fiber optic modular system holds a high standard to secure the future with higher demands of uninterrupted communication.

Equipped with transparent dustcaps which makes it easier to detect errors. All fiber optic connections from Micropol are individual tested prior to delivery and protocols are always delivered with the product.
